Questions based on Conditional Statement (if-else statement)

1. Write a program to read the age of a candidate and determine whether he is eligible to cast his/her own vote
2. Write a program to accept two integers and check whether they are equal or not.
3. Write a program to check given number is positive or negative.
4. Write a program to accept a number and check it is less then 500 or greater then 500.
5. Write a program to check given number is even or odd.
6. Write a program to accept a number from user and print if it is divisible by 5 .
7. Write a program to accept a number from user and print if it is multiple of 7 .
8. Write a program to accept two number from user and display greatest number.
9. Write a program to accept two number from user and display smallest number.
10. Write a program to check given char is vowel or consonant.
11. Write a program to accept percentage from user and check student pass or fail.
12. Write a program to check given number in range of 100-200 or not.
13. Write a program to check given number is divisible by 3, 4 and 8 or not.
14. Write a program to accept two numbers and check if the first is a multiple of the second.
15. Write a program to check whether a character is an alphabet or not.
16. Write a program to check whether a character is an uppercase so convert in lower case or lowercase so convert in uppercase char .
17. Write a program to check whether a character is an digit or not.
18. Write a program to check whether a character is an special symbol or not.
19. Write a program to accept salary and credit score and determine loan eligibility.

RECORDED ACCESS

20. Write a program to accept username and password and verify login (hardcoded values).
21. Write a program to check given year is leap year or not.
22. Write a program to check whether the triangle is valid or not if angles are given.
23. Write a program to calculate profit and loss on a transaction.
24. Write a program to check whether the last digit of number (entered by user) is divisible by 3 or not.
25. Write a program to print difference between area of circle but ensure that result must be positive.
26. Write a program to compute the sum of the two input values. If the two values are the same, then return triple their sum.
27. Write a program to check whether a character is uppercase alphabet or not.
28. Write a program to check whether a character lowercase alphabet or not.
29. Write a program to input all sides of a triangle and check whether triangle is valid or not.
30. Write a program that will take a number as input and find the absolute difference between the input number and 51. If the input number is greater than 51, it will return triple the absolute difference.
31. Write a program that checks two given integers and returns true if at least one of them is 30 or if their sum is 30. In other words, if either of the two integers is 30 or if their sum equals 30, the program will return true
