@ hello_world_institute

Hello World Institute

Address : 2nd Floor , Near KFC , Tower Square , Bhawarkua , Indore

Questions based on Conditional Statement (while loop statement)

1. Wap to print "hello world institute" message 7 times and "learn coding and make app" 12 tiems.
2. Write a program to display the first 100 natural numbers.
3. Write a program to display 50 to 100 numbers.
4. Write a program to display 34 to 67 numbers.
5. Write a program to display 100 to 1 numbers in reverse order.
6. Write a program to display 50 to 23 numbers in reverse order.
7. Write a program to display 34 to 5 numbers in reverse order.
8. Write a program to display number 1 to n (given number).
9. Write a program to display number square 1 to n (given number).
10. Write a program to display number cube 1 to n (given number).
11. Write a program to display table of given number.
12. Write a program to display number between given range.
13. Write a program to display even number series.
14. Write a program to display odd number series.
15. Write a program to display multiple of 7 between given range.
16. Write a program to display sum 1 to n (given number).
17. Write a program to display average 1 to n (given number).
18. Write a program to display sum 1 to n (given number) only even numbers sum.
19. Write a program to display sum 1 to n (given number) only odd numbers sum.
20. Write a program to display sum 1 to n (given number) only multiple of 5 numbers sum.
21. Write a program to display lowercase alphabet a to z.

22. Write a program to display upper alphabet A to Z.
23. Write a program to display upper alphabet using ascii code.
24. Write a program to display factors of given number.
25. Calculate power of a number without using pow().
26. Write a program to display factors count of given number.
27. Write a program to display factorial of given number.
28. Write a program to check given number is prime or not.
29. Write a program to check given number is perfect or not.
30. Write a program takes a number as input and prints each digit of the number in reverse order, with each digit displayed on a separate line.
31. Write a program to takes a number as input and calculates the sum of its individual digits.
32. Write a program to that takes a number as input and calculates the sum of only its even digits.
33. Write a program to that takes a number as input and calculates the sum of only its odd digits.
34. Write a program that takes a number as input and counts how many digits it contains.
35. Write a program that takes a number as input and counts how many even digits it contains.
36. Write a program that takes a number as input and counts how many odd digits it contains.
37. Write a program that takes a number and a single digit as input, and checks whether the digit exists in the given number or not.
38. Write a program that takes a number and a single digit as input, and counts how many times the digit appears in the given number.
39. Write a program that takes a number as input and displays its digits in reverse order as a new number.

40. Write a program that takes a number as input and checks whether it is a palindrome or not. (A number is a palindrome if it reads the same forward and backward.)
41. Write a to find the HCF (Highest Common Factor) of two numbers.
42. Write a to find the LCM (Least Common Multiple) of two numbers.
43. Write a to find the LCM of any two number using HCF.
44. Write a program to convert a binary number into a decimal number without using array, function and while loop.
45. Write a program to convert a decimal number into binary without using an array.
46. Wap to check given number is Armstrong or not if given number is three digit number. (153, 370, 371, 407).
47. Write a program that takes a number as input and checks whether it is an Armstrong number or not.

An Armstrong number is a number whose sum of its own digits each raised to the power of the number of digits equals the number itself.
48. Write a program that takes a number as input and checks whether it is a Strong number or not.

A Strong number is a number in which the sum of the factorials of its digits is equal to the number itself.
49. Write a program that takes a number and repeatedly finds the sum of its digits until only a single digit remains (using nested while).
50. Write a program to find and display the first and last digit of a given number.
